

ABSTRACT OF THE DISCLOSURE

The main object of the present invention is to provide a pattern forming body or a color filter, wherein a color filter can be manufactured efficiently by a simple process, and also, no cracks and no influence to an alignment of a liquid crystal.

The present invention achieves the above mentioned object by providing a pattern forming body comprising: a base material; a photocatalyst containing layer, comprising at least a photocatalyst, formed on the base material; a protecting part formed on the photocatalyst containing layer; a property variable layer, whose surface property is varied by a function of a photocatalyst due to an energy irradiation, formed so as to cover the photocatalyst containing layer and the protecting part; and a property-varied pattern which is a property varied property variable layer.
